This document itself may not be modified in any way, except as needed for the purpose of developing International Digital Enterprise Alliance, Inc. ("Idealliance") specifications. Use of the specification or standard set forth in this document shall not create for the user any rights in or to such specification or standard or this document, which rights are exclusively reserved to Idealliance or its licensors or contributors.

Use of this document and any specification or standard contained herein is voluntary. By making use of this document or any specification or standard contained herein, the user assumes all risks and waives all claims against Idealliance, its licensors and contributors. By making this document available, Idealliance is not providing any professional services or advice to any person or entity. Any person or entity utilizing this document or any specification or standard contained herein should rely upon the advice of a competent professional before using any such information.

NO WARRANTY, EXPRESSED OR IMPLIED, IS MADE REGARDING THE ACCURACY, ADEQUACY, COMPLETENESS, LEGALITY, RELIABILITY OR USEFULNESS OF ANY INFORMATION CONTAINED IN THIS DOCUMENT OR IN ANY SPECIFICATION OR STANDARD OR OTHER PRODUCT MADE AVAILABLE BY IDEALLIANCE. THIS DOCUMENT AND THE INFORMATION CONTAINED HEREIN AND INCLUDED IN ANY SPECIFICATION OR STANDARD OR OTHER PRODUCT OR SERVICE OF IDEALLIANCE IS PROVIDED ON AN "AS IS" BASIS. IDEALLIANCE DISCLAIMS ALL WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO, ANY ACTUAL OR ASSERTED WARRANTY OF NON-INFRINGEMENT OF PROPRIETARY RIGHTS, MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.

IN NO EVENT SHALL IDEALLIANCE, ITS LICENSEES, CONTRIBUTORS OR THEIR RESPECTIVE OFFICERS, DIRECTORS, EMPLOYEES, AGENTS, REPRESENTATIVES, SUPPLIERS OR CONTENT OR SERVICE PROVIDERS BE LIABLE FOR DAMAGES OF ANY KIND, INCLUDING WITHOUT LIMITATION, DIRECT, INDIRECT, COMPENSATORY, SPECIAL, INCIDENTAL, PUNITIVE OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION DAMAGES FROM DATA LOSS OR BUSINESS INTERRUPTION) EVEN IF MADE AWARE OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN AN ACTION UNDER CONTRACT, TORT OR ANY OTHER THEORY, ARISING OUT OF OR IN CONNECTION WITH THE USE, INABILITY TO USE OR PERFORMANCE OF THIS DOCUMENT, THE SPECIFICATION OR STANDARD CONTAINED HEREIN, OR ANY OTHER DOCUMENT OR SPECIFICATION OR STANDARD MADE AVAILABLE BY IDEALLIANCE.

Some states do not allow the disclaimer or limitation of damages, so the disclaimers set forth above apply to the maximum extent permitted under applicable law.

Idealliance takes no position regarding the validity or scope of any intellectual property or other rights that might be claimed or implicated with respect to the implementation or use of the technology described in this document or the extent to which any license under such rights might or might not be available. Idealliance does not represent that it has made any effort to identify any such rights. Information on Idealliance's procedures with respect to rights in Idealliance specifications can be found at the Idealliance website at [www.Idealliance.org](http://www.Idealliance.org). Copies of third-party claims of rights, assurances of licenses to be made available, or the result of an attempt made to obtain a general license or permission for the use of such proprietary rights by implementers or users of this specification, can be obtained from the President of Idealliance at [patent-disclosure@Idealliance.org](mailto:patent-disclosure@Idealliance.org).

Idealliance requests interested parties to disclose any copyrights, trademarks, service marks, patents, patent applications, or other proprietary or intellectual property rights which may cover technology that may be required to implement this specification. Please address the information to the President of Idealliance at [patent-disclosure@Idealliance.org](mailto:patent-disclosure@Idealliance.org).

## Abstract

This document describes the messaging protocol for use by mailers and their consignees. The Mail.XML™ Transaction Protocol defines the roles and responsibilities of Shippers and Consignees and defines the format and method for message exchange. This messaging protocol is designed to be XML and Web-Services compliant and to work with FAST.

Mail.XML and Mail.dat are trademarks of Idealliance.

## About MailXML™

Mail.XML™ is bringing a paradigm change to the industry by increasing business function specific B2B (Business to Business) communication within the industry that supports automation and in the end enables cost avoidance and higher profits through improved competence and effectiveness of communication. Mail.XML is designed to increase efficiency and lower costs by removing many manual data entry processes and enabling quick near real time communication between business partners. Mail.XML currently supports container based scheduling, pick up and drop off business processes, as well as identifying different business entities responsible for performing different services such as quality of mailing, address correction, and delivery confirmation on a mailing.

The core focus of Mail.XML is communication between industry members and from industry to the final mail processing and delivery organization that delivers the mail to the end consumer, e.g., USPS.

In the next few versions of Mail.XML the focus moves across mailing supply chain channels, and includes advanced functions such as payment; automated verification; enabling first, second, and third party communication and incorporating presort planning, printing, and distribution processes.

## What's New in MailXML Version 21.0?

With this release, the Mail.XML Messaging Protocol moves to Version 21.0. In addition to minor cleanup, this release supports ongoing USPS modernization and automation efforts for 2018.

Changes supported by MailXML 21.0 include:

- Update the ContainerVisibilityEntry to contain fields to allow users to receive new Scan State events for Container / Handling Units..
- As part of the January 2018 Price Change release, PostalOne! will use the Container Type defined in the Qualification Report for Periodicals Sacks and Trays to map to the correct line on the postage statement. MailXML V21.0 allows line mapping for sack/tray directly as part of the PeriodicalStatementCreateRequest.
- Mail.XML V21.0 will add support for ASF (Auxiliary Service Facility) in ContainerStatusQueryResponse.
- MailXML V21.0 updates the ContainerVisibilityEntry to allow users to determine the party that was received the visibility data.
- MailXML V21.0 enables USPS to requiring permit information for Mailing Agents when only CRID or MID information is used to identify the correct Mailing Agent.

**Note:** In order to modify a campaign, a user must first delete the campaign and then create a new campaign with the updated parameters. There is no message to update or modify a campaign at this time.

## About MailXML Schema Modularization

Today Mail.XML messages are grouped into 8 message types.

- Transportation Messages (TM)
- Mailing Messages (MM)
- Data Distribution Messages (DD)
- Dynamic Payment Template Messages
- Identification Messages (ID)
- Supply Chain Messages (SC)
- Informed Visibility (IV)
- System Messages
- Base: Shared simple types
- Definitions: Shared complex types and elements

The simple types shared across 2 or more modules are found in the Base schema. Likewise the shared definitions module contains complex type definitions and elements that are shared across 2 or more modules.

## MailXML Module Versioning Rules

The following versioning rules will be followed:

- The MailXML wrapper schema<sup>\*\*</sup>.xsd) will always be given the next higher version number (or Errata designation) when any update is made to base, defs or any module. The name of the .xsd file will indicate the new version and the new version number will be used in the namespace and target declarations:  
**xmlns:mailxml="http://Idealliance.org/Specs/mailxml21.0/mailxml"**  
**targetNamespace="http://Idealliance.org/Specs/mailxml21.0/mailxml"**
- When updates are made, only those modules that are updated will be given the next higher version number (or Errata letter designation).
- If updates are made to the base or defs, then the base and defs xsds will be given the next higher version number (or Errata designation) **and** all modules that call to them will also be given the next higher version number (or Errata designation).

For example:

- If the wrapper version is labeled as  
xmlns:mailxml="http://Idealliance.org/Specs/mailxml15.0A/mailxml" then at least one of the XSDs is at same version such as filename = 'mailxml\_15.0.A.xsd' <- Errata A

- If the wrapper version is labeled as  
xmlns:mailxml="http://Idealliance.org/Specs/mailxml15.0B/mailxml" then at least one of the XSDs is  
at same version such as filename = 'mailxml\_15.0B.xsd' <- Errata B
- If the wrapper version is labeled as  
xmlns:mailxml="http://Idealliance.org/Specs/mailxml15.0/mailxml" then at least one of the XSDs is  
at same version such as filename = 'mailxml\_15.0.xsd' <- Major Version

## MailXML 21.0 XSD Modules:

The following MailXML XSD modules/namespaces are used:

- **mailxml\_tm.xsd:** This module contains all the transportation (or FAST) messages and the attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml\_tm:**
- **mailxml\_mm.xsd:** This module contains all the mailing messages (eDoc) and the attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml\_mm:**
- **mailxml\_iv.xsd:** This module contains informed visibility messages and the attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml\_iv:**
- **mailxml\_dd.xsd:** This module contains all the data distribution messages and the attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml\_dd:**
- **mailxml\_id.xsd:** This module contains all the identification messages and the attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml\_id:**
- **mailxml\_sc.xsd:** This module contains all the supply chain messages and the attributes, elements and complex types that are *unique* to these messages. **Namespace=mailxml\_sc:**
- **mailxml\_defs.xsd:** This module contains all the common definitions of attributes, elements and complex types that are used across two or more message types. **Namespace=mailxml\_defs:**
- **mailxml\_base.xsd:** This module contains simple types that are shared across two or more modules that make up mailxml. These can be considered a building block for any message group. **Namespace=mailxml\_base:**
- **mailxml.xsd:** This module contains the system messages of MailXML and is used to build custom profiles for MailXML. **Namespace=mailxml:**

## The MailXML™ 21 Messaging Documentation Set

The Mail.XML Messaging Specification has been organized into a set of documents. This *Schemas Specification* is one document in a set of documents that make up the Mail.XML Specification 16.0. Updates in this Specification are NOT backwardly compatible with previous versions. Other documents in the specification set include:

- *Mail.XML™ 21.0: Transportation Messaging Specification* documents all transportation messages
- *Mail.XML™ 21.0: Mailing Messaging Specification* documents all mailing messages
- *Mail.XML™ 21.0: Informed Visibility Specification* documents all informed visibility messages
- *Mail.XML™ 21.0: Data Distribution Messaging Specification* documents all data distribution messages

- *Mail.XML™ 21.0: Identification Messaging Specification* documents all identification messages
- *Mail.XML™ 21.0: Supply Chain Messaging Specification* documents all supply chain messages
- *Mail.XML™ 21.0: System Messaging Specification* documents all systems and fault messages
- *Mail.XML™ 21.0: Simple Types Specification* documents all simple types used across MailXML messages
- *Mail.XML™ 21.0: Common Definitions Specification* documents all shared elements and complex types.
- *Mail.XML™ 21.0: Schemas* contains the .XSDs that make up the MailXML Messaging Specification

element **ContainerManifestUpdateRequest/Container**

diagram	 The diagram shows the structure of the <code>mailxml_mm:Container</code> element. It is a container element with a cardinality of 1..∞. It contains a <code>mailxml_mm:containerManifestType</code> group, which is also a container element with a cardinality of 0..∞. This group contains several elements: <code>mailxml_mm:IMcb</code> , <code>mailxml_mm:IMtb</code> , <code>mailxml_mm:IMpb</code> , <code>mailxml_mm:ContainerID</code> , <code>mailxml_mm:StatementID</code> , <code>mailxml_mm:EntryPointZip</code> , and <code>mailxml_mm:EntryLocaleKey</code> . The <code>mailxml_mm:ContainerID</code> and <code>mailxml_mm:StatementID</code> elements have a cardinality of 0..∞, while the others have a cardinality of 1..∞.

element **MailPieceCancelRequest**

diagram	 <p>The diagram illustrates the structure of the <b>MailPieceCancelRequest</b> element. It is a complex structure with multiple nested elements and attributes. The root element is <b>MailPieceCancelRequest</b>, which contains a <b>mailxml_mm:mailPieceCancelType</b> element. This type element has several attributes: <b>mailxml_defs:CustomerGroupID</b>, <b>mailxml_defs:MailingGroupID</b>, <b>mailxml_defs:MaildatJobID</b>, and <b>mailxml_defs:UserLicenseCode</b>. The main body of the request is composed of several elements: <b>mailxml_mm:SubmittingParty</b>, <b>mailxml_mm:SubmittingSoftware</b>, and <b>mailxml_mm:SubmitterTrackingID</b>. These are followed by a choice of elements: <b>mailxml_mm:UserLicenseCode</b>, <b>mailxml_mm:MaildatJobID</b>, and <b>mailxml_mm:TransmittedCount</b>. The choice is then followed by a sequence of elements: <b>mailxml_mm:PDRMailPieceBlock</b> (1..∞), <b>mailxml_mm:PDRRangePieceBlock</b> (1..∞), <b>mailxml_mm:MailPieceID</b> (1..∞), and <b>mailxml_mm:PieceRangeID</b> (1..∞). Finally, there is a choice of elements: <b>mailxml_mm:CustomerGroupID</b>, <b>mailxml_mm:MailingGroupID</b>, and <b>mailxml_mm:TransmittedCount</b>, followed by <b>mailxml_mm:MailPieceBlockGroup</b> (1..∞) and <b>mailxml_mm:MailXMLPieceRange...</b> (1..∞).</p>

**element PostageStatementStatusQueryResponse/QueryResults/PostageStatementSummary**

diagram	<p>The diagram shows the structure of the <code>mailxml_mm:PostageStatementSummary</code> element. It is a sequence container (indicated by a box with a small square on the right) containing a sequence of elements (indicated by a box with a small circle on the right). The sequence is defined by the <code>mailxml_defs:postageStatementSummaryType</code> type. The elements in the sequence are: <code>mailxml_defs:StatementID</code>, <code>mailxml_defs:UserPostageState...</code>, <code>mailxml_defs:UserPostageState...</code>, <code>mailxml_defs:USPSPostage Statem...</code>, and <code>mailxml_defs:Postage StatementSt...</code>. The cardinality for the sequence is <code>1..∞</code>.</p>
children	<code>mailxml_defs:StatementID</code> <code>mailxml_defs:UserPostageStatementID</code> <code>mailxml_defs:UserPostageStatementSequenceID</code> <code>mailxml_defs:USPSPostageStatementSequenceID</code> <code>mailxml_defs:PostageStatementStatus</code>

**element PostageStatementStatusQueryResponse/QueryResults/ReturnInfo**

diagram	<p>The diagram shows the structure of the <code>mailxml_mm:ReturnInfo</code> element. It is a sequence container (indicated by a box with a small square on the right) containing a sequence of elements (indicated by a box with a small circle on the right). The sequence is defined by the <code>mailxml_defs:basicReturnInfoType</code> type. The elements in the sequence are: <code>mailxml_defs:ReturnCode</code>, <code>mailxml_defs:ReturnDescription</code>, <code>mailxml_defs:errorWarning</code>, and <code>mailxml_defs:ContainerErrorWarn...</code>. The cardinality for the sequence is <code>0..∞</code>. The <code>mailxml_defs:errorWarning</code> and <code>mailxml_defs:ContainerErrorWarn...</code> elements have a cardinality of <code>0..∞</code> and are marked as optional (indicated by a plus sign in a square).</p>

element **abstractInternationalPostageStatementDataType/ContainerPostage**

diagram	 A diagram showing the structure of the <code>mailxml_mm:ContainerPostage</code> element. On the left, a dashed box labeled <code>mailxml_mm:ContainerPostage</code> is connected to a larger structure. The larger structure is a dashed box labeled <code>mailxml_mm:containerPostageType</code> with a yellow background. Inside this box, there are four elements: <code>mailxml_mm:ContainerID</code> , <code>mailxml_mm:ContainerDetailID</code> , <code>mailxml_mm:Pieces</code> , and <code>mailxml_mm:Copies</code> . The <code>mailxml_mm:Copies</code> element is further expanded to show three sub-elements: <code>mailxml_mm:IMtb</code> , <code>mailxml_mm:IMcb</code> , and <code>mailxml_mm:IMpb</code> . A multiplicity of <code>0..∞</code> is indicated near the connection point.

element **mailPieceBlockType/UPAAddress**

diagram	 <p>The diagram illustrates the structure of the <code>mailxml_mm:UPAAddress</code> element. It is a dashed box containing a solid box labeled <code>mailxml_defs:addressType</code>. Inside <code>mailxml_defs:addressType</code>, there is an <code>attributes</code> compartment (indicated by a small square icon) containing a dashed box for <code>mailxml_defs:CommunicationRole</code>. Below the <code>attributes</code> compartment is a connector box (indicated by a small circle with a plus sign) that branches into two paths. The first path leads to a list of four dashed boxes: <code>mailxml_defs:Address1</code>, <code>mailxml_defs:Address2</code>, <code>mailxml_defs:Address3</code>, and <code>mailxml_defs:Address4</code>. The second path leads to a list of four dashed boxes: <code>mailxml_defs:City</code>, <code>mailxml_defs:County</code>, <code>mailxml_defs:State</code>, and <code>mailxml_defs:ZipCode</code>. Finally, there is a dashed box for <code>mailxml_defs:GPSCoordinates</code> with a small square icon in its bottom right corner, indicating it is a required attribute.</p>

element **specialProductInformationType/SenderName**

diagram	 A diagram showing the element <code>mailxml_mm:SenderName</code> in a dashed rectangular box with a small icon to its left.
---------	---

element **specialProductInformationType/SenderEmailAddress**

diagram	 A diagram showing the element <code>mailxml_mm:SenderEmailAddress</code> in a dashed rectangular box with a small icon to its left.
---------	---

element **specialProductInformationType/SenderSMSNumber**

diagram	 A diagram showing a dashed rectangular box containing the text "mailxml_mm:SenderSMSNumber".
---------	--

element **specialProductInformationType/RecipientSMSNumber**

diagram	 A diagram showing a dashed rectangular box containing the text "mailxml_mm:RecipientSMSNumber".
---------	---

complexType **STCForContainerOrTrayType**

diagram	 A diagram showing the structure of the STCForContainerOrTrayType complex type. It starts with a box labeled "STCForContainerOrTrayType" followed by a sequence container (rectangle with three dots). This is followed by a choice container (oval with a vertical line). The choice container has two branches: one leading to a box labeled "mailxml_mm:StartTheClockDate" and another leading to a dashed box containing three stacked elements: "mailxml_mm:IMtb", "mailxml_mm:IMcb", and "mailxml_mm:IMpb".
children	<a href="#">mailxml_mm:StartTheClockDate</a> <a href="#">mailxml_mm:IMtb</a> <a href="#">mailxml_mm:IMcb</a> <a href="#">mailxml_mm:IMpb</a>

element **STCForContainerOrTrayType/StartTheClockDate**

diagram	 A diagram showing a solid rectangular box containing the text "mailxml_mm:StartTheClockDate".
---------	---

element **STCForContainerOrTrayType/IMtb**

diagram	 A diagram showing a dashed rectangular box containing the text "mailxml_mm:IMtb".
---------	---

element **STCForContainerOrTrayType/IMcb**

diagram	 A diagram showing a dashed rectangular box containing the text "mailxml_mm:IMcb".
---------	---

element **STCForContainerOrTrayType/IMpb**

diagram	 A diagram showing a dashed rectangular box containing the text "mailxml_mm:IMpb".
---------	---
